Q: Hive - why does this operation take so long on a local table I have a Hive table containing a very large amount of data (~1.6mil rows). This operation takes 17h to run on the local table that I'm running the query on. I have plenty of disk space (100+GB) available. Why does this run so slow? Furthermore, I'm trying to create some missing columns (e.g. create some columns based on the where clause in the code below). It's pretty slow doing it this way (it takes about 10h). Is there another way to do this? create or replace table my\_table ( c1 e79caf774b
